Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If the period for reply specified above is less than thirty (30) days, a reply within the statutory minimum of thirty (30) days will be considered timely.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

Claims 1-14 are rejected under 35 U.S.C. 102(e) as being anticipated by Wilson (6631302).

Claim one merely read on attaching a first element A to a second element B while a beam is transmitting through the element in an optical head. The reference shows an optical head assembly having an objective lens assembly (226 and 228) being attached to a second optical element 224 and 216 while the light beam fig 4 element 239 is in communication through the photo detection 232.

With respect to the limitations of claims 2 and 9. the reference shows the use of an optical axis 239 and a second optical axis 244 wherein the alignment is determined based on the reflected light beam on the photo detection 232.

With respect to the limitations of claims 3 and 10. the reference discloses the use of a Camera 122 that detects the optical axis X, Y and Z.

With respect to the limitations of claims 4-6 and 11-13. the reference shows the use of UV element 138 having the assembly as shown in figs 7 and 8.

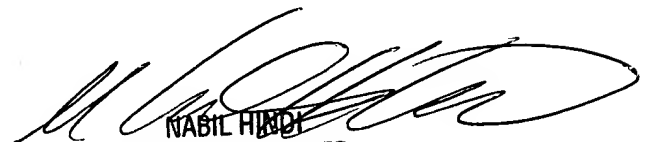

With respect to the limitations of claims 7 and 14. see element 20 fig 4.

Art Unit: 2655

Claim15 is allowed.

None of the cited prior art shows or teaches an optical head assembling method wherein the objective lens and optical assembly are positioned, the optical assembly having a forward sense element, the objective lens position and the optical assembly are adjusted till objective lens and the forward sense element are in optical communication with each other as shown in fig 1 elements 22, 47, 40, 42, 44 and 46.
